

## ATTACHMENT A **Ecological Scoping Checklist**

Site Name	Ajax/Magnolia
Date of Site Visit	September 21 & 22, 2004
Site Location	3.5 miles N of Granite, Grant County, Oregon, Umatilla National Forest
Site Visit Conducted by	Johnna Evans

## Part **0**

CONTAMINANTS OF INTEREST Types, Classes, Or Specific Hazardous Substances ‡ Known Or Suspected	Onsite	Adjacent to or in locality of the facility †
Mining related activities – primarily metals	Yes	Yes

## Part 2

OBSERVED IMPACTS ASSOCIATED WITH THE SITE	Finding
Onsite vegetation (None, Limited, Extensive)	E
Vegetation in the locality of the site (None, Limited, Extensive)	E
Onsite wildlife such as macroinvertebrates, reptiles, amphibians, birds, mammals, other	L
(None, Limited, Extensive)	
Wildlife such as macroinvertebrates, reptiles, amphibians, birds, mammals, other in the	L
locality of the site (None, Limited, Extensive)	
Other readily observable impacts (None, Discuss below)	D
Discussion:	
There are numerous waste rock piles scattered across the site. Many of the waste rock pile	s are
vegetated with trees and some grasses. There are a couple of settling ponds that receive	
input from adit drainage.	

<sup>&</sup>lt;sup>‡</sup> As defined by OAR 340-122-115(30) <sup>†</sup> As defined by OAR 340-122-115(34)

## ATTACHMENT A Ecological Scoping Checklist (cont'd)

## Part **3**

SPECIFIC EVALUATION OF ECOLOGICAL RECEPTORS / HABITAT	Finding
Terrestrial – Wooded	
Percentage of site that is wooded	95
Dominant vegetation type (Evergreen, Deciduous, Mixed)	Е
Prominent tree size at breast height, i.e., 4 feet (<6", 6" to 12", >12")	6" – 12"
Evidence / observation of wildlife (Macroinvertebrates, Reptiles, Amphibians, Birds,	M, B, M
Mammals, Other)	
Terrestrial - Scrub/Shrub/Grasses	
Percentage of site that is scrub/shrub	<5
Dominant vegetation type (Scrub, Shrub, Grasses, Other)	G, O
Prominent height of vegetation (<2', 2' to 5', >5')	<2'
Density of vegetation (Dense, Patchy, Sparse)	D
Evidence / observation of wildlife (Macroinvertebrates, Reptiles, Amphibians, Birds,	M, B, M
Mammals, Other)	
Terrestrial – Ruderal	
Percentage of site that is ruderal	<5
Dominant vegetation type (Landscaped, Agriculture, Bare ground)	В
Prominent height of vegetation (0', >0' to <2', 2' to 5', >5')	<2'
Density of vegetation (Dense, Patchy, Sparse)	S
Evidence / observation of wildlife (Macroinvertebrates, Reptiles, Amphibians, Birds,	M, M
Mammals, Other)	
Aquatic - Non-flowing (lentic)	
Percentage of site that is covered by lakes or ponds	<1
Type of water bodies (Lakes, Ponds, Vernal pools, Impoundments, Lagoon, Reservoir,	P
Canal)	
Size (acres), average depth (feet), trophic status of water bodies	<1, <1, P
Source water (River, Stream, Groundwater, Industrial discharge, Surface water runoff)	Su
Water discharge point (None, River, Stream, Groundwater, Wetlands impoundment)	S, W
Nature of bottom (Muddy, Rocky, Sand, Concrete, Other)	M
Vegetation present (Submerged, Emergent, Floating)	E
Obvious wetlands present (Yes / No)	Y
Evidence / observation of wildlife (Macroinvertebrates, Reptiles, Amphibians, Birds,	M, M
Mammals, Other)	

## ATTACHMENT A Ecological Scoping Checklist (cont'd)

SPECIFIC EVALUATION OF ECOLOGICAL RECEPTORS / HABITAT	Finding
Aquatic - Flowing (lotic)	
Percentage of site that is covered by rivers, streams (brooks, creeks), intermittent streams, dry wash, arroyo, ditches, or channel waterway	1
Type of water bodies (Rivers, Streams, Intermittent Streams, Dry wash, Arroyo, Ditches, Channel waterway)	S
Size (acres), average depth (feet), approximate flow rate (cfs) of water bodies	<1, <6", 5
Bank environment (cover: Vegetated, Bare / slope: Steep, Gradual / height (in feet))	V/S-G
Source water (River, Stream, Groundwater, Industrial discharge, Surface water runoff)	Su, G
Tidal influence (Yes / No)	N
Water discharge point (None, River, Stream, Groundwater, Wetlands impoundment)	S
Nature of bottom (Muddy, Rocky, Sand, Concrete, Other)	R,M
Vegetation present (Submerged, Emergent, Floating)	Е
Obvious wetlands present (Yes / No)	Y
Evidence / observation of wildlife (Macroinvertebrates, Reptiles, Amphibians, Birds, Mammals, Other)	M,B,M
Aquatic – Wetlands	<del>!</del>
Obvious or designated wetlands present (Yes / No)	Y
Wetlands suspected as site is/has (Adjacent to water body, in Floodplain, Standing water, Dark wet soils, Mud cracks, Debris line, Water marks)	A,F,S
Vegetation present (Submerged, Emergent, Scrub/shrub, Wooded)	E/S
Size (acres) and depth (feet) of suspected wetlands	<1,<1
Source water (River, Stream, Groundwater, Industrial discharge, Surface water runoff)	Su, G
Water discharge point (None, River, Stream, Groundwater, Impoundment)	S
Tidal influence (Yes / No)	N
Evidence / observation of wildlife (Macroinvertebrates, Reptiles, Amphibians, Birds, Mammals, Other)	B,M

<sup>\*</sup> P: Photographic documentation of these features is highly recommended.

## Part 4

ECOLOGICALLY IMPORTANT SPECIES / HABITATS OBSERVED						
Creek/Wetlands						
Redband trout observed by EA Engineering, Science, and Technology, Inc. (2004).						

## ATTACHMENT B Evaluation of Receptor-Pathway Interactions

EVALUATION OF RECEPTOR-PATHWAY INTERACTIONS	Y	N	U	
Are hazardous substances present or potentially present in surface waters?	X			
AND				
Are ecologically important species or habitats present?	X			
AND				
Could hazardous substances reach these receptors via surface water?	X			
When answering the above questions, consider the following:				
<ul> <li>Known or suspected presence of hazardous substances in surface waters.</li> </ul>				
<ul> <li>Ability of hazardous substances to migrate to surface waters.</li> </ul>				
Terrestrial organisms may be dermally exposed to water-borne contaminants				
as a result of wading or swimming in contaminated waters. Aquatic receptors				
may be exposed through osmotic exchange, respiration or ventilation of				
surface waters.				
• Contaminants may be taken-up by terrestrial plants whose roots are in contact				
with surface waters.				
• Terrestrial receptors may ingest water-borne contaminants if contaminated				
surface waters are used as a drinking water source.				
Are hazardous substances present or potentially present in groundwater?  AND	X			
Are ecologically important species or habitats present?	X			
AND	Λ			
Could hazardous substances reach these receptors via groundwater?		X		
When answering the above questions, consider the following:				
Known or suspected presence of hazardous substances in groundwater.				
Ability of hazardous substances to migrate to groundwater.				
Potential for hazardous substances to migrate via groundwater and discharge				
into habitats and/or surface waters.				
Contaminants may be taken-up by terrestrial and rooted aquatic plants whose				
roots are in contact with groundwater present within the root zone (~1m				
depth).				
Terrestrial wildlife receptors generally will not contact groundwater unless it is				
discharged to the surface.				
"V" = ves: "N" = No "II" = Unknown (counts as a "V")				

<sup>&</sup>quot;Y" = yes; "N" = No, "U" = Unknown (counts as a "Y")

## ATTACHMENT B Evaluation of Receptor-Pathway Interactions (cont'd)

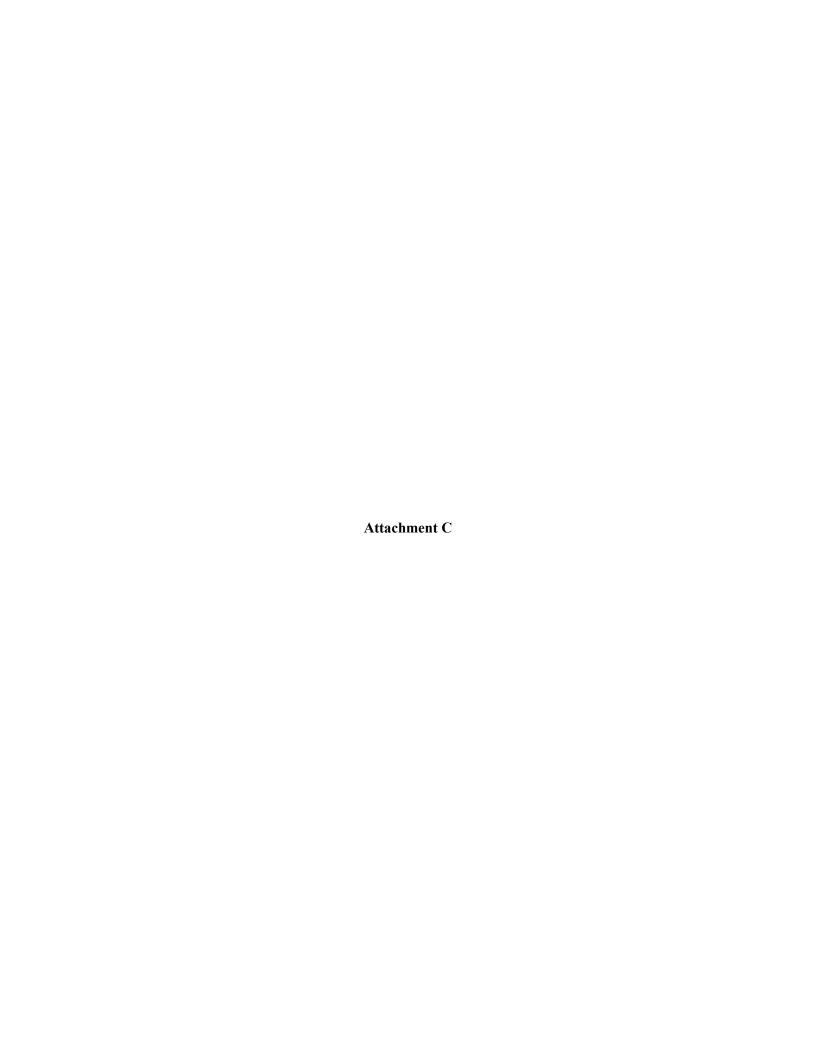

EVALUATION OF RECEPTOR-PATHWAY INTERACTIONS	Y	N	U
Are hazardous substances present or potentially present in sediments?	X		
AND	37		
Are ecologically important species or habitats present? AND	X		
Could hazardous substances reach these receptors via contact with sediments?	X		
When answering the above questions, consider the following:	71		
Known or suspected presence of hazardous substances in sediment.			
Ability of hazardous substances to leach or erode from surface soils and be carried into sediment via surface runoff.			
<ul> <li>Potential for contaminated groundwater to upwell through, and deposit contaminants in, sediments.</li> </ul>			
• If sediments are present in an area that is only periodically inundated with water, terrestrial species may be dermally exposed during dry periods. Aquatic receptors may be directly exposed to sediments or may be exposed through osmotic exchange, respiration or ventilation of sediment pore waters.			
<ul> <li>Terrestrial plants may be exposed to sediment in an area that is only periodically inundated with water.</li> </ul>			
<ul> <li>If sediments are present in an area that is only periodically inundated with water, terrestrial species may have direct access to sediments for the purposes of incidental ingestion. Aquatic receptors may regularly or incidentally ingest sediment while foraging.</li> </ul>			
Are hazardous substances present or potentially present in prey or food items of	X		
ecologically important receptors?			
AND Are ecologically important species or habitats present?	X		
AND	Λ		
Could hazardous substances reach these receptors via consumption of food items?	X		
When answering the above questions, consider the following:			
<ul> <li>Higher trophic level terrestrial and aquatic consumers and predators may be exposed through consumption of contaminated food sources.</li> </ul>			
• In general, organic contaminants with log K <sub>ow</sub> > 3.5 may accumulate in terrestrial mammals and those with a log K <sub>ow</sub> > 5 may accumulate in aquatic vertebrates.			

<sup>&</sup>quot;Y" = yes; "N" = No, "U" = Unknown (counts as a "Y")

## ATTACHMENT B Evaluation of Receptor-Pathway Interactions (cont'd)

EVALUATION OF RECEPTOR-PATHWAY INTERACTIONS	Y	N	U	
Are hazardous substances present or potentially present in surficial soils?	X			
AND Are coalegically important species or helitate present?	X			
Are ecologically important species or habitats present? AND	Λ			
Could hazardous substances reach these receptors via incidental ingestion of or	X			
dermal contact with surficial soils?				
When answering the above questions, consider the following:				
• Known or suspected presence of hazardous substances in surficial (~1m depth)				
soils.				
Ability of hazardous substances to migrate to surficial soils.				
Significant exposure via dermal contact would generally be limited to organic				
contaminants that are lipophilic and can cross epidermal barriers.				
• Exposure of terrestrial plants to contaminants present in particulates deposited on leaf and stem surfaces by rain striking contaminated soils (i.e., rain splash).				
<ul> <li>Contaminants in bulk soil may partition into soil solution, making them</li> </ul>				
available to roots.				
Incidental ingestion of contaminated soil could occur while animals grub for				
food resident in the soil, feed on plant matter covered with contaminated soil				
or while grooming themselves clean of soil.	X			
Are hazardous substances present or potentially present in soils?				
AND	37			
Are ecologically important species or habitats present? AND	X			
Could hazardous substances reach these receptors via vapors or fugitive dust carried		X		
in surface air or confined in burrows?		21		
When answering the above questions, consider the following:				
• Volatility of the hazardous substance (volatile chemicals generally have				
Henry's Law constant > 10 <sup>-5</sup> atm-m <sup>3</sup> /mol and molecular weight < 200 g/mol).				
• Exposure via inhalation is most important to organisms that burrow in				
contaminated soils, given the limited amounts of air present to dilute vapors				
and an absence of air movement to disperse gases.				
• Exposure via inhalation of fugitive dust is particularly applicable to ground-dwelling species that could be exposed to dust disturbed by their foraging or				
burrowing activities or by wind movement.				
<ul> <li>Foliar uptake of organic vapors would be limited to those contaminants with</li> </ul>				
relatively high vapor pressures.				
• Exposure of terrestrial plants to contaminants present in particulates deposited				
on leaf and stem surfaces.				

<sup>&</sup>quot;Y" = yes; "N" = No, "U" = Unknown (counts as a "Y")

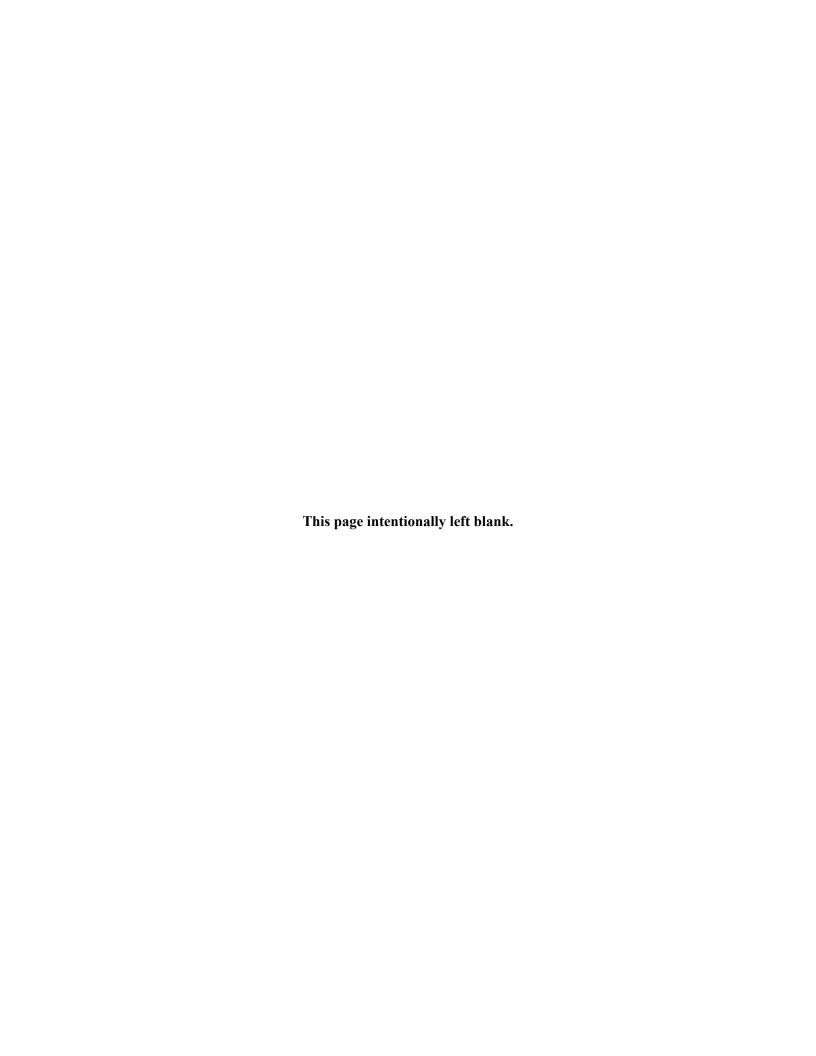

Table C1
Ecological Risk Assessment: Preliminary Screening - Soil/Waste Pile Data (results are reported in mg/kg)

	Minimum Detected	Maximum Detected	90%	Essential	Retained For	Detection	Retained for	Background	Include for Risk-Based
Analyte	Concentration	Concentration	UCL 1, 2	Nutrient?	Screening?	Frequency	Screening?	Concentration	Screening?
Aluminum	1340	23200	13900	No	Yes	100%	Yes	24400	No
Antimony	0.44 <b>U</b>	78.5	45.1	No	Yes	87%	Yes	0.84	Yes

EPC - exposure point concentration

NP - non protected NA - not available

CPEC - constituent of potential ecological concern

U - Analyzed for but not detected at detection limit; value = 1/2 of detection limit

#### Notes:

- 1. Chemicals retained after preliminary screening (essential nutrient, detection frequency, and background concentration comparison).
- 2. The EPC is equal to the maximum detected concentration. This EPC is used for plant and invertebrate receptors.
- 3. The EPC is equal to the 90% upper confidence limit. This EPC is used for bird and wildlife receptors.
- 4. Rejected for both normal and lognormal distributions so 90% UCL calculated using Chebyshev Inequality method for nonparametric data (beryllium, cadmium, lead, nickel, and selenium).

**5/N**<sub>ii</sub> = 0.2777778 0.33333333 0.384615385

5. When there were fewer than 10 samples or the 90% UCL was greater than MDC, we used the MDC as the EPC (chromium<sub>6</sub>, silver, and cyanide).

# of COIs (Nii) =

- 6. SLVs for Arsenic(III) are listed.
- 7. Efroymson, R.A., M.E. Will, and G.W. Suter II. 1997. Toxicological Benchmarks for Contaminants of Potential Concern for Effects on Soil and Litter Invertebrates and Hetertrophic Process: 1997 Revision. ES/ER/TM-162/R2. Prepared for the US Department of En
- 8. SLVs for plant, invertebrate, and bird receptors is based on Chromium(III) and SLV for mammal receptors is based on Chromium(VI).

#### Abbreviations:

EPC - exposure point concentration

NA - not available

CPEC - contaminant of potential ecological concern

- U Analyzed for but not detected at detection limit; value = 1/2 of detection limit
- **B** Detected at concentration between method detection limit and practical quantitation limit; value = reported concentration
- H The screening level value was adjusted based on the hardness of the water at the location of the maximum observed concentration.

#### Notes:

- 1. Chemicals retained after preliminary screening (essential nutrient, detection frequency, and background concentration comparison).
- 2. According to the SI: beryllium, cadmium, cyanide, and silver were not detected in any samples.
- 3. The SLV is based on total concentrations; therefore, the EPC is expressed as the total concentration.
- 4. Arsenic screening level values were obtained from ODEQ, 2001 Arsenic III.
- 5. Screening level values for Chromiumt were based on the most conservative value of Chromium III or Chromium VI in the Level II guidance document (ODEQ, 2001).

# COIs (N<sub>ij</sub>) =

1/N<sub>ii</sub>:

5/N<sub>ii</sub> =

0.0526

0.2632

- 6. Although the SLV for mercury is based on the total concentration, we used the dissolved concentration because it was reported as being greater than the total.
- 7. Single COI risk ratio (Tij) = EPC/SLV
- 8. Risk posed to a non-protected receptor from a single COI is evaluated by: Tij > 5
- 9. Risk posed to a protected receptor from a single COI is evaluated by: Tij > 1
- 10. Multiple COI risk ratio = Tij/Tj, provided Tj > Q. Tj for birds and mammals was less than 5; therefore, risk from exposure to multiple COIs was not evaluated for these receptors.
- 11. Risk posed to a non-protected receptor from multiple COIs is evaluated by: Tij/Tj > 5/Nij
- 12. Risk posed to a protected receptor from multiple COIs is evaluated by: Tij/Tj > 1/Nij

- **U** Analyzed for but not detected at detection limit; value = 1/2 of detection limit.
- **B** Detected at concentration between method detection limit and practical quantitation limit; value = reported concentration.
- EPC exposure point concentration
- CPEC Constituent of potential environmental concern
- NP non protected
- P protected
- 1. Chemicals retained after preliminary screening (essential nutrient, detection frequency, and background concentration comparison).
- 2. Concentration is reported as the dissolved concentration in the water column, unless otherwise noted.
- 3. Analyte is reported as the total concentration in the water column.
- 4. A chemical is an identified CPEC if it poses a risk to non-protected aquatic life. Assessed by:  $T_{ij} > 5$

# APPENDIX C APPLICABLE OR RELEVANT AND APPROPRIATE REQUIREMENTS

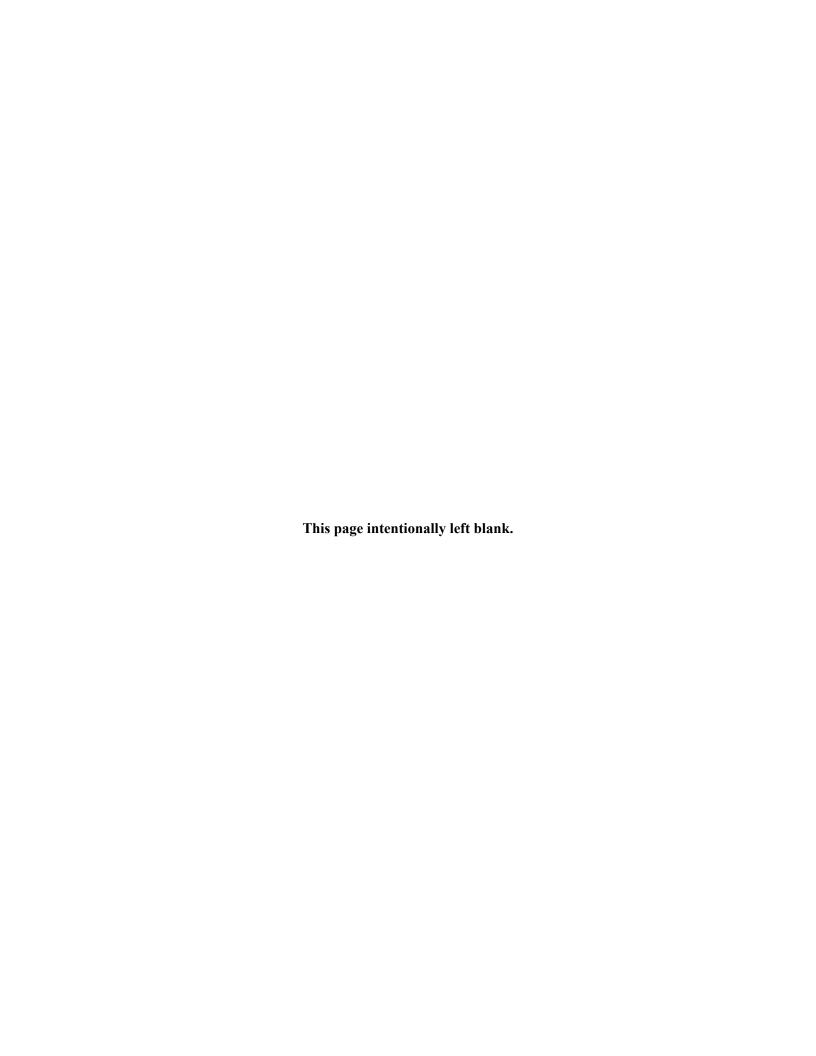

Table C-1. Chemical-Specific Applicable or Relevant and Appropriate Requirements. Ajax/Magnolia Mines, Oregon

Standard, Requirement			, 9
Criteria, or Limitation	Citation	Description	Applicable/Relevant and Appropriate?
		FEDERAL	
Safe Drinking Water Act	40 USC §300		
National Primary Drinking Water Regulations	40 CFR Part 141	Establishes health-based standards, maximum contaminant levels (MCLs), for public water systems.	Not an ARAR, groundwater has been eliminated from the removal action.
National Secondary DrinkingWater Regulations	40 CFR Part 143	Establishes aesthetic standards (secondary MCLs) for public water systems	Not an ARAR, these are not enforceable standards and are outside scope of removal action.
Clean Water Act	33 USC §§1251- 1387		
National Ambient Water Quality Criteria	40 CFR Part 131	Sets criteria for water quality based on toxicity to aquatic organisms and human health.	Not an ARAR since the State of Oregon has been delegated this program.
Clean Air Act	40 USC §7409		
National Primary and Secondary Ambient Air Quality Standards	40 CFR Part 50	Establishes air quality levels that protect public health.	Not an ARAR—only "major" sources are subject to requirements related to NAAQS, defer to state regulation of fugitive dust emissions.
Resource Conservation and Recovery Act	40 USC §7601		
Lists of Hazardous Wastes	40 CFR Part 261, Subpart D and C	Defines those solids wastes which are subject to regulation as hazardous wastes under 40 CFR Parts 262-265 and Parts 124, 270, and 271.	Not an ARAR – mine waste is not a listed hazardous waste, Bevill exempt. Even if TCLP testing confirmed a characteristic waste (Subpart C), it is still exempt. Parts of the RCRA regulations may be relevant and appropriate, however, and are discussed under action-specific requirements.

Table C-1. Chemical-Specific Applicable or Relevant and Appropriate Requirements. Ajax/Magnolia Mines, Oregon (continued)

Standard, Requirement Criteria, or Limitation	Citation	Description	Applicable/Relevant and Appropriate?
_		STATE OF OREGON	-
Hazardous Substance Remedial Action Rules	OAR 340-122-84 and 1-115	Establishes DEQ Guidelines for assessing human health and ecological risk assessments on potential adverse affects from contamination according to DEQ risk guidelines and levels.	Relevant and Appropriate Requirement
Preliminary Remediation Goals (PRGs) for soil and water	US Environmental Protection Agency (EPA) Region 9	Preliminary Remediation Goals (PRGs) are tools for evaluating and cleaning up contaminated sites. They are risk-based concentrations that are intended to assist risk assessors and others in initial screening-level evaluations of environmental measurements. The PRGs contained in the Region 9 PRG Table are generic; they are calculated without site specific information. However, they may be re-calculated using site specific data. PRGs should be viewed as Agency guidelines, not legally enforceable standards. They are used for site "screening" and as initial cleanup goals if applicable.	Relevant and Appropriate Requirement
Hazardous Substance Occupational Exposure	OAR 437	Establishes OR-OSHA Permissible Exposure Limits (PELs). OR-OSHA exposure limits mirror the federal chemical specific limits (refer to NIOSH Pocket Guide to Chemical Hazards for details on individual chemicals)	Relevant and Appropriate Requirement
Numeric Soil Cleanup Levels for Motor Fuel and Heating Oil	OAR 340-122-305 through 360	Establish cleanup standards for contamination of soil by motor fuel and heating oil.	To Be Considered at Former Oil Tank Station
Oregon Soil Cleanup Rules for Simple Sites	OAR 340-122-045 and 046	Establishes DEQ rules for streamlined cleanup processes and numerical cleanup standards at simple sites.	To Be Considered
State of Oregon is authorized by the USEPA to implement the Clean Water Act in Oregon	Clean Water Act – FWQC 40 CFR	Establishes acceptable contaminant levels for ingestion of aquatic organisms and for intake by aquatic organisms in surface water.	Applicable Requirement
Asbestos Removal	OAR 340-32-5620 through 5650	Establish DEQ requirements for licensing and certification for asbestos workers. All workers who handle asbestos-containing materials must meet certain training, licensing and certification requirements.	Relevant and Appropriate Requirement
